

DIRECTIONS: Solve for the variable. Remember to get both sides to have the same bases. Then set your exponents equal to each other.

1. $3^x = \frac{1}{27}$

2. $5^x = \sqrt{125}$

3. $8^{2+x} = 2$

4. $4^{1-x} = 8$

5. $27^{2x-1} = 3$

6. $49^{x-2} = 7\sqrt{7}$

7. $4^{2x+5} = 16^{x+1}$

8. $3^{-(x+5)} = 9^{4x}$

9. $25^{2x} = 5^{x+6}$

10. $6^{x+1} = 36^{x-1}$

11. $10^{x-1} = 100^{4-x}$
