CONES

What is a cone?

- When you spin a right triangle (using one of the legs as an axis), you get a cone

Cones vs. Pyramids

- How are cones and pyramids similar?

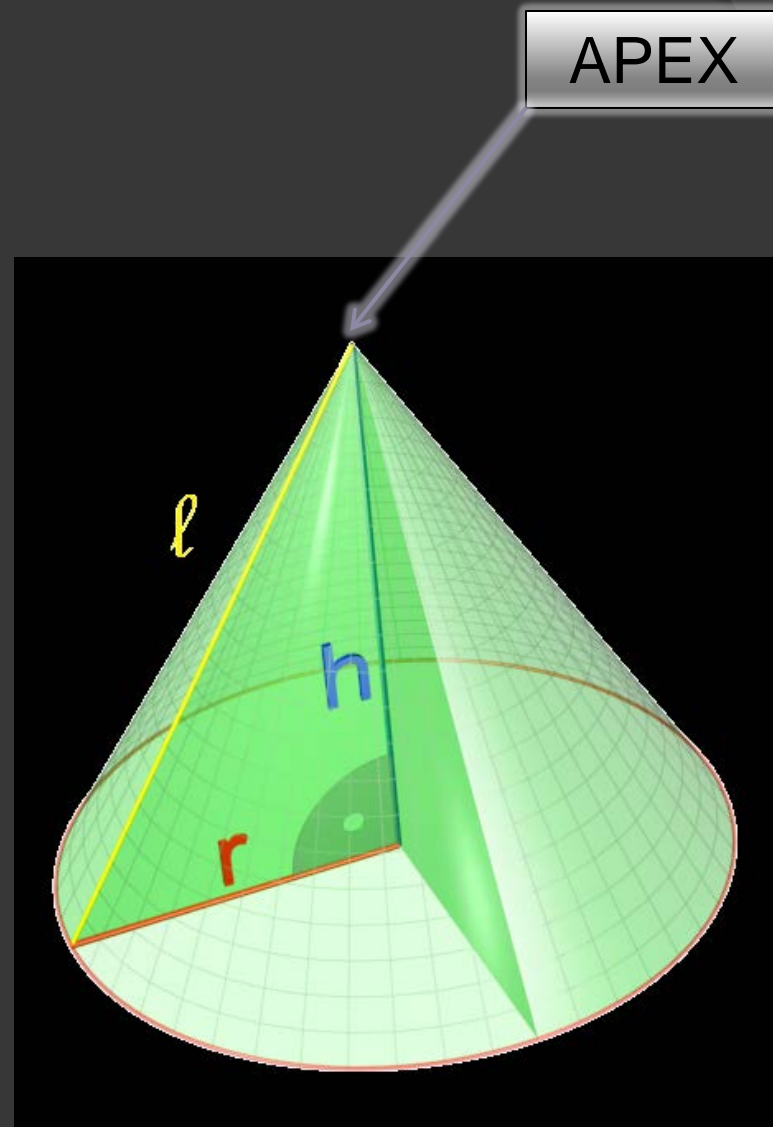

Cones vs. Pyramids

- ⦿ How are cones and pyramids similar?
- ⦿ How are cones and pyramids different?

Parts of a cone

- The apex is the point at the top of the cone

Parts of a cone

- ⦿ The **base** is the circle at the bottom (or top, if you're eating ice cream!) of the cone
- ⦿ The **radius** of that circle is called **r**.

BASE

Parts of a cone

- ⦿ The perpendicular distance from the circular base to the apex is the height, which we call h .

Parts of a cone

- ⦿ The **slant height**, which we call **l** , is the distance from the apex to a point on the circle.

Right triangle in a cone

- ⦿ A cone has one right triangle
- ⦿ $h^2 + r^2 = l^2$

Cone – Lateral Area

- ◎ The LATERAL AREA of a cone includes the “side” of the cone (not the circular base)

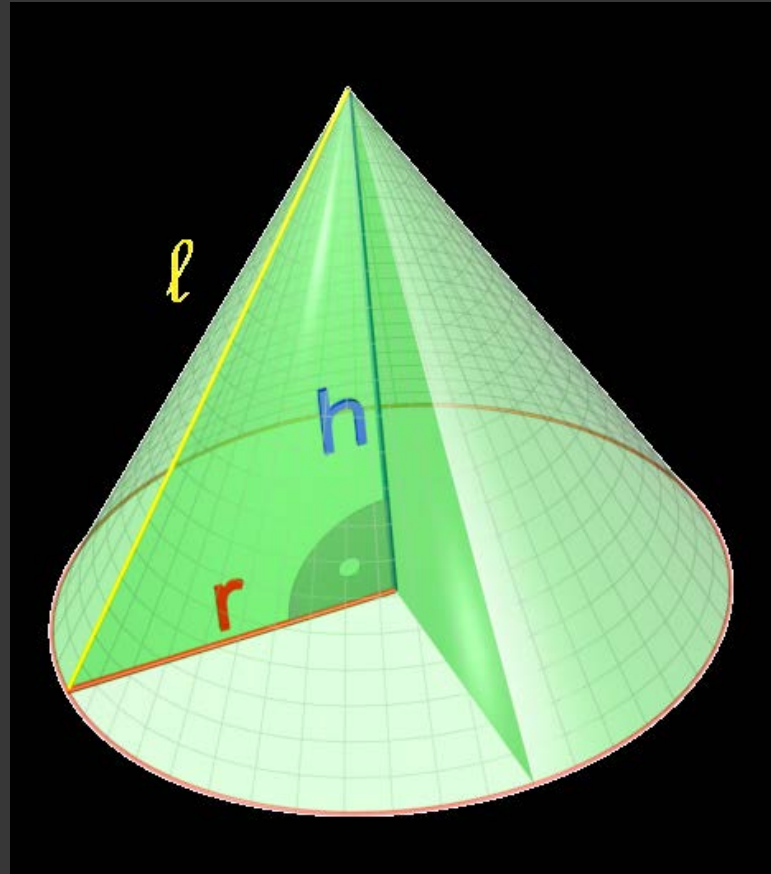

- ◎ $L.A. = \frac{1}{2} (2\pi r) \cdot l$
or
 $L.A. = \pi r l$

Cone – Surface Area

- ⦿ The SURFACE AREA of a cone is the sum of the lateral area and the circular base

- ⦿ $S.A. = L.A. + \pi r^2$

Cone – Volume

- ⦿ The VOLUME of a cone is the amount of space inside the cone

- ⦿ $V = \frac{1}{3} (\pi r^2) \cdot h$

Cone – Example

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Find the cone's...
 - Lateral Area
 - Surface Area
 - Volume

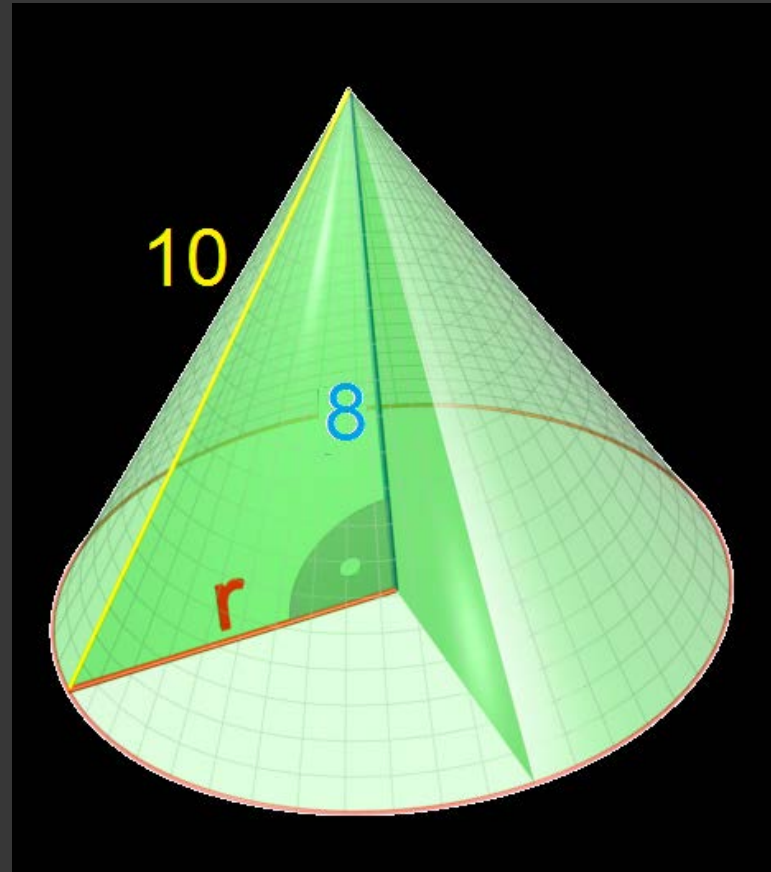

Cone – Example – How to start

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's start by making sure we know h , r , and l .

Cone – Example – How to start

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ $h = 8$ and $l = 10$
- ⦿ We need to calculate r .

Cone – Example – How to start

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ $h = 8$ and $l = 10$
- ⦿ We can use $h^2 + r^2 = l^2$

Cone – Example – How to start

- ⊙ A cone has a height of 8 cm and a slant height of 10 cm.

- ⊙ $h = 8$ and $l = 10$

$$8^2 + r^2 = 10^2$$

Cone – Example – How to start

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.

- ⦿ $h = 8$ and $l = 10$

$$64 + r^2 = 100$$

Cone – Example – How to start

⦿ A cone has a height of 8 cm and a slant height of 10 cm.

⦿ $h = 8$ and $l = 10$

$$r^2 = 36$$

Cone – Example – How to start

⦿ A cone has a height of 8 cm and a slant height of 10 cm.

⦿ $h = 8$ and $l = 10$

$$r = 6$$

Now we know all three segments!

Cone – Example – Lateral Area

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the lateral area
- ⦿ $L.A. = \frac{1}{2} (2\pi r) \cdot l$

Cone – Example – Lateral Area

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the lateral area
- ⦿ $L.A. = \frac{1}{2}(2\pi \cdot 6) \cdot 10$

Cone – Example – Lateral Area

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the lateral area
- ⦿ $L.A. = 60\pi \text{ cm}^2$

Cone – Example – Surface Area

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the surface area
- ⦿ $S.A. = L.A. + \pi r^2$

Cone – Example – Surface Area

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the surface area
- ⦿ $S.A. = 60\pi + \pi(6)^2$

Cone – Example – Surface Area

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the surface area
- ⦿ $S.A. = 60\pi + 36\pi$

Cone – Example – Surface Area

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the surface area
- ⦿ $S.A. = 96\pi \text{ cm}^2$

Cone – Example – Volume

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the volume
- ⦿ $V = \frac{1}{3} (\pi r^2) \cdot h$

Cone – Example – Volume

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the volume
- ⦿ $V = \frac{1}{3} (36\pi) \cdot 8$

Cone – Example – Volume

- ⦿ A cone has a height of 8 cm and a slant height of 10 cm.
- ⦿ Let's find the volume
- ⦿ $V = 12\pi \cdot 8$

Cone – Example – Volume

- ⊙ A cone has a height of 8 cm and a slant height of 10 cm.
- ⊙ Let's find the volume
- ⊙ $V = 96\pi \text{ cm}^3$

Cone – Summary

- Right Triangle

$$h^2 + r^2 = l^2$$

- Lateral Area

$$L.A. = \frac{1}{2} (2\pi r) \cdot l$$

or

$$L.A. = \pi r l$$

- Surface Area

$$S.A. = L.A. + \pi r^2$$

- Volume

$$V = \frac{1}{3} (\pi r^2) \cdot h$$
